If a Knock-in Event occurs, the performance of the product is always given by the Coupons paid out during the term. If a Knock-in Event occurs, the investor will receive a physical delivery of a number of Underlyings as defined in Ratio of the Underlying having the largest negative performance. The acquisition price of the delivered Underlyings is 100.00% of the Initial Fixing Value. This negative performance is reduced by the guaranteed Coupons paid out during the term. The table above is valid at maturity only and is by no means meant as a price indication for the present product throughout its lifetime. Additional risk factors may have a significant impact on the value of the product during the term. The price quoted on the secondary market can therefore deviate substantially from the above table. For this table it was assumed, that Alcon AG was the worst performing Underlying. This selection is just a representative example of the possible alternatives. If the Final Fixing Value of all Underlyings is at or above the Cap Level, the performance of the product is always given by the Coupons

paid out during the term.

3. Material Risks for Investors

Issuer Risk

Specific product risks

Structured products are complex financial instruments, which entail considerable risks and, accordingly, are only suitable for investors who have the requisite knowledge and experience and understand thoroughly the risks connected with an investment in these structured products and are capable of bearing the economic risks.
