You are about to purchase a product that is not simple and may be difficult to understand.

What is this product?

Type This product is a debt security in the form of an uncertificated security issued under Swiss law.

Term The product has a fixed term and matures - subject to early redemption - on 21/11/2024.

Objectives The objective of this Product is to provide the Investor with an entitlement to returns in the form of Coupon Payments which are independent of the performance of the Underlyings (each an "Underlying" and together the "Underlyings", see table below). The Coupon Payments are equal to 8.1171% p.a. of the Denomination and are payable on the Coupon Dates.

Repayment on maturity

If the product has not been repaid early and the investor holds the product until the Redemption Date, the maximum amount that the investor may receive is the redemption amount (as described below) plus the sum of the coupon amounts. The investor does not participate in the positive performance of the Underlyings. By investing in the product, the investor will receive a redemption amount equal to the Denomination on the Redemption Date, provided that the Underlyings perform favourably for the investor. If the Underlyings perform unfavourably for the investor, the redemption amount may be lower. In detail:

- If the price of **each** Underlying is quoted above its Knock-in Level at any time during the Knock-in Level Observation Period: the product is repaid in the amount of the Denomination.
- If the price of at least one Underlying is quoted at or below its Knock-in Level at any time during the Knock-in Level Observation Period and
 - if the Final Fixing Value of **each** Underlying is at or above its Cap Level: the product is repaid in the amount of the Denomination; or
 - if the Final Fixing Value of at least one Underlying is below its Cap Level: the product is repaid at an amount equal to the Denomination multiplied by the Final Fixing Value of the worst-performing Underlying divided by its Cap Level, i.e. the redemption amount is linked to the negative performance of the worst-performing Underlying. In such a case, the investor suffers a loss if the redemption amount is lower than the amount he invested.

The product is currency hedged, i.e. the calculation of the repayment does not depend on exchange rate fluctuations between the product currency and the currency of the underlying (quanto style).

If the investor purchases the product during the term, he does not pay any additional accrued interest because this is included in the trading price ("dirty price").

The investor has no entitlements arising from the underlyings and/or components of the underlying (e.g. voting rights and dividends).

The risk and return profile of the product described above will change if the product is sold before the Redemption Date.

The product provides for automatic early repayment prior to the Redemption Date if the value of **each** Underlying closes at or above its Call Level on an Observation Date. In such cases, the product is repaid on the respective Early Redemption Date at the Denomination plus the Coupon payment for the relevant period. The investor is not entitled to any further Coupon payments.

According to the product terms and conditions, in case of an extraordinary event adjustments may be made to the product and the Issuer may terminate the product early. These events are specified in the product terms and conditions, and mainly relate to the Underlyings, the product and the Issuer. In such cases, the redemption amount may be significantly lower than the purchase price. The Investor should therefore be prepared to accept a partial or total loss of his

investments. In addition, the investor bears the risk of a termination at a time that is unfavourable for him and that he can only reinvest the redemption amount at less favourable conditions.

Target Market The product is aimed at Retail investors who are pursuing the objective of general asset accumulation and optimisation and have a very short-term investment horizon. This product is intended for investors with extended knowledge and/or experience of financial products. The investor may bear losses up to a total loss of the invested capital and places no value on capital protection.

What are the risks and what could I get in return?

Risk indicator

Lower risk < **1** 2 3 4 5 6 7 > Higher risk

The risk indicator assumes you keep the product until maturity. The actual risk can vary significantly if you cash in at an early stage and you may get back less. You may not be able to cash in early. You may have to pay significant extra costs to cash in early.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product in the risk class 1 on a scale of 1 to 7, where 1 corresponds to risk class the lowest. This rates the potential losses from future performance at a very low level, and poor market conditions are very unlikely to impact our capacity to pay you. **If the currency of the country in which you purchase this product or of the account to which sums paid on this product are credited differs from the currency of the product, please be aware of the currency risk. You will receive payments in a different currency so your final return will depend on the exchange rate between the two currencies. This risk is not taken into account in the indicator given above.** This product does not include any protection from future market performance so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment.

Performance scenarios What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted. The scenarios shown are illustrations based on results from the past and on certain assumptions. Markets could develop very differently in the future.

Recommended holding period: Until the product is called or matures. This may be different in each scenario is indicated in the table.

Example Investment: CHF 10,000.00

If you exit at call or maturity

Scenarios

Minimum CHF 406. **The return is only guaranteed if you hold the product until the first call date.**

Stress **What you might get back after costs** CHF 2824
Percentage return -71.76 %

Unfavourable (products ends after 21/08/2024) **What you might get back after costs** CHF 10201
Percentage return 2.01 %

Moderate (products ends after 21/08/2024) **What you might get back after costs** CHF 10201
Percentage return 2.01 %

Favourable (products ends after 21/08/2024) **What you might get back after costs** CHF 10201
Percentage return 2.01 %

The scenarios shown represent possible outcomes calculated based on simulations. In the case of an early redemption, it has been assumed that no reinvestment has occurred.

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back. The stress scenario shows what you might get back in extreme market circumstances.

This product cannot be cashed in. If you exit the investment before the entitlement to the guaranteed coupon amount arises (usually corresponds to the first call date) you have to pay extra costs.

What happens if Zürcher Kantonalbank Finance (Guernsey) Ltd is unable to pay out?

You are exposed to the risk that the Issuer might be unable to fulfil its obligations in respect of the product – e.g. in the event of insolvency (inability to pay / over-indebtedness) or an administrative order of resolution measures. A total loss of the capital invested is possible. As a debt instrument, the product is not subject to any deposit protection scheme.

What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods. The duration of this product is uncertain as it may terminate at different times depending on how the market evolves. The amounts shown here consider two different scenarios (early call and maturity). In case you decide to exit before the product ends, exit costs may apply in addition to the amounts shown here.

We have assumed:

- CHF 10,000.00 is invested

- a performance of the product that is consistent with each holding period shown.

How long should I hold it and can I take money out early?

Recommended holding period: 21/11/2024 (maturity) The objective of this product is to provide the investor with the entitlement described above under "What is this product?" provided the product is held to maturity. The actual holding period may vary depending on the (auto)callable structure of the product. The investor has the option to redeem the product by selling the product to the product manufacturer. The product manufacturer endeavors to publish bid prices for the product under normal market conditions on each banking day, but is not legally obliged to do so. If you sell the product before the end of the recommended holding period, the amount you then receive may be less, even substantially, than the amount you would otherwise have received.
