	2. Profit and Loss Expectations at Maturity
Profit and Loss Expectations at Maturity	Warrants offer the opportunity to generate profits through price changes in the Underlying via a Leverage effect. The profit potential for Call Warrants is basically unlimited. The loss potential is limited to the capital invested. Due to the Leverage effect, the value of a Warrant changes more strongly than the value of the Underlying. The value of a Call Warrant generally decreases if the price of the Underlying decreases. The value of a Warrant may also decrease if the price of the Underlying remains unchanged because the time value and/or volatility decreases or supply and demand develop unfavorably.
	3. Material Risks for Investors
lssuer Risk	Obligations under these products constitute direct, unconditional and unsecured obligations of the Issuer and rank pari passu with other direct, unconditional and unsecured obligations of the Issuer. The value of the product not only depends on the performance of the Underlying and other developments in the financial markets, but also on the solvency of the Issuer, which may change during the term of this product.
Specific product risks	Warrants involve the risk of losing the initial capital paid (Issue Price) altogether. They are intended only for experienced investors who understand and are able to bear the associated risks. If the Warrants are denominated in a currency other than the Underlying, the investor bears the exchange rate risks, if any, between the product Currency and the currency of the Underlying.
	Warrants do not yield any current income. If there is no increase in the price of the Underlying and/or volatility, a Call Warrant generally loses value and may expire worthless at expiry. The
	Zürcher Kantonalban

maximum risk is therefore the loss of the capital invested.

4. Additional Terms
