- If the Issuer does not exercise its one-sided early redemption right on an Observation Date, the product continues to run until the next Observation Date.

If no Early Redemption event has occurred, the following redemption scenarios are possible.

**Redemption at maturity**

If no Knock-in Event occurs, the product is redeemed at Denomination.

If a Knock-in Event occurs and if the Final Fixing Value of all Underlyings is at or above the Cap Level, the investor receives a cash redemption in the amount of the Denomination.

If a Knock-in Event occurs and if the Final Fixing Value of at least one Underlying is below its Cap Level, the investor receives a cash redemption in the amount of the Denomination multiplied by the Final Fixing Value and divided by the Cap Level of the worst performing Underlying (between Initial Fixing Date and Final Fixing Date).

The Coupons are paid out on the respective Coupon Date not depending on the performance of the Underlyings.

The calculation of the Redemption is independent of any changes in foreign exchange rates between the Currency of the product and the currency of the Underlyings (Quanto Style).

The product shall not be listed on an exchange.

**Key elements of the product**

A ZKB Barrier Reverse Convertible on worst of is an investment product, which can be redeemed early on different dates at the discretion of the Issuer. The product pays out coupons on defined dates during the term. This product is a combined investment instrument that essentially consists of a fixed income security and the sale of a down-and-in put option. This allows the investor to benefit from the current volatility of the Underlyings. An above-average return is achieved when prices fall slightly, stagnate or rise slightly. If no Knock-in Event occurs, the investor receives a cash redemption in the amount of the Denomination. If a Knock-in Event occurs, the investor will receive a cash redemption in accordance with section "Redemption Method". The calculation of the Redemption is independent of any changes in foreign exchange rates between the Currency of the product and the currency of the Underlyings (Quanto Style).

**Tax aspects**

The product is considered as transparent and has no predominant one-off interest (Non-IUP). The Coupon of 14.50% p.a. is divided into a premium payment of 13.569% p.a. and an interest payment of 0.931% p.a.. The option premium part qualifies as capital gain and is not subject to Swiss income tax for private investors with Swiss tax domicile. The interest payment is subject to income tax at the time of payment. The Swiss withholding tax is not levied. The Federal securities transfer stamp tax is levied on secondary market transactions.

The product may be subject to further withholding taxes or duties, in particular under the rules of FATCA or Sect. 871(m) U.S. Tax Code or foreign financial transaction taxes. All payments from this product are made after deduction of any withholding taxes and levies. The information above is a summary only of the Issuer's understanding of current law and

practice in Switzerland relating to the taxation of these products. The relevant tax law and practice may change. The Issuer does not assume any liability in connection with the above information. The tax information only provides a general overview and can not substitute the personal tax advice to the investor.

The redemption scenario above neglects Early redemption.

If a Knock-in Event occurs, the performance of the product is always given by the Coupons paid out during the term. If a Knock-in Event occurs and if the Final Fixing Value of the Underlying is below the Cap Level, the investor receives a cash repayment corresponding to the Denomination divided by the Cap Level and multiplied by the Final Fixing Value of the worst performing Underlying. Therefore, the investor may suffer a partial or total loss. The acquisition price is 100.00% of the Initial Fixing Value. This negative performance is reduced by the guaranteed Coupons paid out during the term.

The table above is valid at maturity only and is by no means meant as a price indication for the present product throughout its lifetime. Additional risk factors may have a significant impact on the value of the product during the term. The price quoted on the secondary market can therefore deviate substantially from the above table. For this table it was assumed, that Rheinmetall I was the worst performing Underlying. This selection is just a representative

example of the possible alternatives. Currency risks between the Underlyings and the Product are not considered in the table.

### 3. Material Risks for Investors
