## Redemption Method

### Early Redemption

The Early Redemption depends on the value of the Underlyings on the respective Observation Date.

- If the closing price of all Underlyings on the Observation Date is at or above the Call Level, the product will be redeemed early at Denomination.
- If the closing price of at least one Underlying on the Observation Date is below the Call Level, the product continues.

If no Early Redemption event has occurred, the following redemption scenarios are possible.

### Redemption at maturity

If no Knock-in Event occurs, the product is redeemed at Denomination.

If a Knock-in Event occurs and if the Final Fixing Value of all Underlyings is at or above the Cap Level, the investor receives a cash redemption in the amount of the Denomination.

If a Knock-in Event occurs and if the Final Fixing Value of at least one Underlying is below its Cap Level, a physical delivery of the worst performing Underlying takes place (between Initial Fixing Date and Final Fixing Date). The number of Underlyings per Denomination is defined in Ratio (fractions will be paid in cash, no cumulation).

The Coupons are paid out on the respective Coupon Date not depending on the performance of the Underlyings.

If a Knock-in Event occurs, the performance of the product is always given by the Coupons paid out during the term. If a Knock-in Event occurs and if the Final Fixing Value of at least one Underlying is below the Cap Level, the investor will receive a physical delivery of a number of Underlyings as defined in Ratio of the Underlying having the largest negative performance. Therefore, the investor may suffer a partial or total loss. The acquisition price of the delivered Underlyings is 100.00% of the Initial Fixing Value. This negative performance is reduced by the guaranteed Coupons paid out during the term.

The table above is valid at maturity only and is by no means meant as a price indication for the Zürcher Kantonalbank

present product throughout its lifetime. Additional risk factors may have a significant impact on the value of the product during the term. The price quoted on the secondary market can therefore deviate substantially from the above table. For this table it was assumed, that AXA SA was the worst performing Underlying. This selection is just a representative example of the possible alternatives. Currency risks between the Underlyings and the Product are not considered in the table.
