This product is a combined investment instrument that essentially consists of a fixed income security and the sale of a put option. This allows the investor to benefit from the current volatility of the Underlyings. An above-average return is achieved when prices fall slightly, stagnate or rise slightly. If the Final Fixing Value of all Underlyings is at or above the Cap Level, the investor receives a cash redemption in the amount of the Denomination. If the Final Fixing Value of at least one Underlying is below the Cap Level, the investor will receive a physical delivery of a number of Underlyings of the Underlying with the worst performance between Initial Fixing Date and Final Fixing Date.
<b>Tax aspects</b>	The product is considered as transparent and has predominant one-off interest (IUP). The option premium part qualifies as capital gain and is not subject to Swiss income tax for private investors with Swiss tax domicile. The interest payment is subject to income tax and is determined in compliance with the 'modifizierte Differenzbesteuerung' tax rule based on the ESTV Bondfloor Pricing method. The Swiss withholding tax is not levied. In the case of physical delivery of the Underlying at maturity, the federal securities transfer stamp is levied on the basis of the Cap Level. The Federal securities transfer stamp tax is not levied on secondary market transactions. The product may be subject to further withholding taxes or duties, in particular under the rules of FATCA or Sect. 871(m) U.S. Tax Code or foreign financial transaction taxes. If the Final Fixing Value of all Underlyings is at or above the Cap Level, the performance of the product is always given by the Coupons paid out during the term. However, if the Final Fixing Value of at least one Underlying is below the Cap Level, the investor will receive a physical delivery of a number of Underlyings as defined in Ratio of the Underlying having the largest negative performance. Therefore, the investor may suffer a partial or total loss. The acquisition price of the delivered Underlyings is 86.00% of the Initial Fixing Value, which means that the performance of the product is less negative than the performance of the Underlying. This negative performance is reduced by the guaranteed Coupons paid out during the term. The table above is valid at maturity only and is by no means meant as a price indication for the present product throughout its lifetime. Additional risk factors may have a significant impact on the value of the product during the term. The price quoted on the secondary market can therefore deviate substantially from the above table. For this table it was assumed, that Nestlé SA was the worst performing Underlying. This selection is just a representative example of the possible alternatives. Currency risks between the Underlyings and the Product are not considered in the table.

### 3. Material Risks for Investors

#### Issuer Risk

Obligations under these products constitute direct, unconditional and unsecured obligations of the Issuer and rank pari passu with other direct, unconditional and unsecured obligations of the Issuer. The value of the product not only depends on the performance of the Underlying and other developments in the financial markets, but also on the solvency of the Issuer, which may change during the term of this product.

#### Specific product risks

Structured products are complex financial instruments, which entail considerable risks and, accordingly, are only suitable for investors who have the requisite knowledge and experience and understand thoroughly the risks connected with an investment in these structured products and are capable of bearing the economic risks. The loss potential of an investment in ZKB Reverse Convertible Defensive on worst of in the case of a title delivery is limited to the difference between the purchase price of the product and the cumulative value of the number of Underlyings as defined in Ratio. The Coupon, which is paid out in any case, reduces the loss of the product compared to a direct investment in the worst performing Underlying. The product is denominated in CHF. If the investor's reference currency differs from the CHF, the investor bears the risk between the CHF and his reference currency.
