If a Knock-in Event occurs, the performance of the product is always given by the Coupons paid out during the term. If a Knock-in Event occurs and if the Final Fixing Value of the Underlying is below the Cap Level, the investor receives a cash repayment corresponding to the Denomination divided by the Cap Level and multiplied by the Final Fixing Value of the worst performing Underlying. Therefore, the investor may suffer a partial or total loss. The acquisition price is 100.00% of the Initial Fixing Value. This negative performance is reduced by the guaranteed Coupons paid out during the term.

The table above is valid at maturity only and is by no means meant as a price indication for the present product throughout its lifetime. Additional risk factors may have a significant impact on the value of the product during the term. The price quoted on the secondary market can therefore deviate substantially from the above table. For this table it was assumed, that L'Oréal SA was the worst performing Underlying. This selection is just a representative example of the possible alternatives. Currency risks between the Underlyings and the Product are not considered in the table.
