Key elements of the product

A ZKB Autocallable Reverse Convertible Defensive on worst of is an investment instrument that can be redeemed early on defined dates depending on the performance of the Underlyings. The product pays out coupons on defined dates during the term. This product is a combined investment instrument that essentially consists of a fixed income security and the sale of a put option. This allows the investor to benefit from the current volatility of the Underlyings. An above-average return is achieved when prices fall slightly, stagnate or rise slightly. If the Final Fixing Value of all Underlyings is at or above the Cap Level, the investor receives a cash redemption in the amount of the Denomination. If the Final Fixing Value of at least one Underlying is below the Cap Level, the investor will receive a cash redemption in accordance with section "Redemption Method". The calculation of the Redemption is independent of any changes in foreign exchange rates between the Currency of the product and the currency of the Underlyings (Quanto Style).

Tax aspects Switzerland

The product is considered as transparent and has no predominant one-off interest (Non-IUP). The Coupon of 8.9256% p.a. is divided into a premium payment of 8.9086% p.a. and an interest payment of 0.017% p.a.. The option premium part qualifies as capital gain and is not subject to Swiss income tax for private investors with Swiss tax domicile. The interest payment is subject to income tax at the time of payment. The Swiss withholding tax is not levied. The Federal securities transfer stamp tax is levied on secondary market transactions. The product may be subject to further withholding taxes or duties, in particular under the rules of FATCA or Sect. 871(m) U.S. Tax Code or foreign financial transaction taxes. All payments from this product are made after deduction of any withholding taxes and levies. The information above is a summary only of the Issuer's understanding of current law and practice in Switzerland relating to the taxation of these products. The relevant tax law and practice may change. The Issuer does not assume any liability in connection with the above information. The tax information only provides a general overview and can not substitute the personal tax advice to the investor.

The redemption scenario above neglects Early redemption.

If the Final Fixing Value of all Underlyings is at or above the Cap Level, the performance of the product is always given by the Coupons paid out during the term. However, if the Final Fixing Value of at least one Underlying is below the Cap Level, the investor receives a cash repayment corresponding to the Denomination divided by the Cap Level and multiplied by the Final Fixing Value of the worst performing Underlying. Therefore, the investor may suffer a partial or total loss. The acquisition price is 80.00% of the Initial Fixing Value (Cap Level), which means that the performance of the product is less negative than the performance of the Underlying. This negative performance is reduced by the guaranteed Coupons paid out during the term.

The table above is valid at maturity only and is by no means meant as a price indication for the present product throughout its lifetime. Additional risk factors may have a significant impact on the value of the product during the term. The price quoted on the secondary market can therefore deviate substantially from the above table. For this table it was assumed, that Airbus SE was the worst performing Underlying. This selection is just a representative example of the possible alternatives. Currency risks between the Underlyings and the Product are not considered in the table.

3. Material Risks for Investors

Issuer Risk

Obligations under these products constitute direct, unconditional and unsecured obligations of the Issuer and rank pari passu with other direct, unconditional and unsecured obligations of the Issuer. The value of the product not only depends on the performance of the Underlying and other developments in the financial markets, but also on the solvency of the Issuer, which may change during the term of this product.

Specific product risks

Structured products are complex financial instruments, which entail considerable risks and, accordingly, are only suitable for investors who have the requisite knowledge and experience and understand thoroughly the risks connected with an investment in these structured products and are capable of bearing the economic risks. The loss potential of an investment in ZKB Autocallable Reverse Convertible Defensive on worst of is limited to the difference between the purchase price and the cash redemption amount as defined in 'Redemption Method'. The Coupon, which is paid out in any case, reduces the loss of the product compared to a direct investment in the worst performing Underlying. The product is denominated in CHF. If the investor's reference currency differs from the CHF, the investor bears the risk between the CHF and his reference currency.
