Key elements of the product

The product pays out coupons on defined dates during the term. This product is a combined investment instrument that essentially consists of a fixed income security and the sale of a down-and-in put option. This allows the investor to benefit from the current volatility of the Underlyings. An above-average return is achieved when prices fall slightly, stagnate or rise slightly. If no Knock-in Event occurs, the investor receives a cash redemption in the amount of the Denomination. If a Knock-in Event occurs, the investor will receive a physical delivery of a number of Underlyings of the Underlying with the worst performance between Initial Fixing Date and Final Fixing Date. The calculation of the Redemption is independent of any changes in foreign exchange rates between the Currency of the product and the currency of the Underlyings (Quanto Style).

Tax aspects

The product is considered as transparent and has predominant one-off interest (IUP). The Coupon of 26.3334% p.a. is divided into a premium payment of 26.3334% p.a. and an interest payment of 0.00% p.a.. The option premium part qualifies as capital gain and is not subject to Swiss income tax for private investors with Swiss tax domicile. The interest payment is subject to income tax and is determined in compliance with the 'modifizierte Differenzbesteuerung' tax rule based on the EStV Bondfloor Pricing method. The Swiss withholding tax is not levied. In the case of physical delivery of the Underlying at maturity, the federal securities transfer stamp is levied on the basis of the Cap Level. The Federal securities transfer stamp tax is not levied on secondary market transactions.

The product may be subject to further withholding taxes or duties, in particular under the rules of FATCA or Sect. 871(m) U.S. Tax Code or foreign financial transaction taxes. All payments from this product are made after deduction of any withholding taxes and levies. The information above is a summary only of the Issuer's understanding of current law and practice in Switzerland relating to the taxation of these products. The relevant tax law and practice may change. The Issuer does not assume any liability in connection with the above information. If a Knock-in Event occurs, the performance of the product is always given by the Coupons paid out during the term. If a Knock-in Event occurs and if the Final Fixing Value of at least one Underlying is below the Cap Level, the investor will receive a physical delivery of a number of Underlyings as defined in Ratio of the Underlying having the largest negative performance. Therefore, the investor may suffer a partial or total loss. The acquisition price of the delivered Underlyings is 100.00% of the Initial Fixing Value (Cap Level). This negative performance is reduced by the guaranteed Coupons paid out during the term.

The table above is valid at maturity only and is by no means meant as a price indication for the present product throughout its lifetime. Additional risk factors may have a significant impact on the value of the product during the term. The price quoted on the secondary market can therefore deviate substantially from the above table. For this table it was assumed, that HelloFresh SE was the worst performing Underlying. This selection is just a representative example of the possible alternatives. Currency risks between the Underlyings and the Product are not considered in the table.
